---

Technical Support Specialist specializing in complex platform configurations and system integrations. GCP-certified with a strong foundation in backend engineering, cloud architecture, and low-level OS mechanics, bringing a developer's mindset to system optimization, API troubleshooting, and performance analysis.

Tier-2 Technical Support Specialist
July 2025 - Current

Teleperformance – Lisbon, Portugal, Lisbon

- Investigate system-level misconfigurations, analyze logs in Meta Business Suite, and collaborate cross-functionally to restore service and prevent recurrence.
- Serve as the technical escalation point for Tier-2 enterprise incidents, diagnosing and debugging complex web-based integrations, API connectivity issues, and data payload failures within Meta's infrastructure.
- Manage high-volume ticket queues using enterprise helpdesk systems while maintaining SLA compliance and documentation accuracy.
- Recognized as Top Performer among 300+ agents for exceptional CSAT impact and resolution quality.
- Optimized ticketing workflows to reduce total response times by 20 minutes daily.
- Streamlined support processes to improve daily team productivity by 45%.
- Independently identified and reported a UI/UX vulnerability in WhatsApp's "View Once" feature to Meta's bug bounty program, which was verified and successfully resolved.

Intensive Software Externship
August 2024

Quidgest, Lisbon

- Completed the **Full Stack Developer – Genio L1** training program, achieving an **80% final evaluation grade**.
- Architected the relational data model and intuitive client/administrator navigation for 'Simplify,' a functional application designed to streamline immigrant documentation workflows.
- Collaborated with R&D trainers to troubleshoot development obstacles and deliver the complete solution on time, despite losing 5 training hours to external disruptions.
- Designed a structured PowerPoint pitch deck and presented the live application's usability and architecture during the final evaluation.

Education

Bachelor’s in computer science and engineering
September 2024 - Current

Faculdade de Ciências e Tecnologia da Universidade Nova de Lisboa, Lisboa

Skills

- **Programming & Databases:** Java, SQL, Relational Data Modeling, Python, C++, Bash, OCaml, Dart
- **Frameworks & Low-Code:** Genio Platform (L1), Spring Boot, React, Tailwind CSS, Flutter
- **DevOps, Cloud & AI:** Docker, GCP, Linux, Git, CI/CD Concepts, AI-Assisted Development (LLMs / Copilot)
- **Integration & Architecture:** REST APIs, JSON/XML, Root Cause Analysis, IPC

Projects

Simplify - Community Integration Platform | Web Development, Cloud Deployment

- **Architected & Deployed:** Scaled the original "Portugal Admission Guide" from a static site into a dynamic, cloud-hosted web platform designed to streamline admissions, housing, and administrative workflows for international newcomers.
- **Business Strategy & Pitching:** Selected to present the project roadmap to the Aga Khan Foundation’s *Impulso Local* program, leveraging business insights to pitch a sustainable, community-led implementation strategy.
- **Stakeholder Collaboration:** Designed the platform architecture not just for individual users, but to facilitate synergies, partnerships, and cross-project collaborations with local associations like FIBI and Aga Khan Foundation

- **Live Demo:** Simplify

Operating Systems & Shell Implementation | C / Bash / Linux
- Engineered a file system simulation implementing inode structures, direct/indirect block allocation, and directory entry recycling, demonstrating a deep understanding of storage architecture and disk management.
- Implemented Inter-Process Communication (IPC) using Pipes and Shared Memory to coordinate concurrent Linux processes.
- Built a custom UNIX-style shell capable of executing system calls, managing permissions, and handling process control.
- Strengthened expertise in memory management, process lifecycle, and low-level OS architecture.

"HomeAway" Accommodation Management System for university students | Java
- Architected a modular object-oriented application to manage student accommodation and services, utilizing strict input validation and data persistence.
- Implemented complex filtering algorithms to rank services by price and location using Manhattan distance calculations.

Certifications

- Google Cloud Cybersecurity Certificate
- Foundations of Coding Back-End (Microsoft)
- Flutter Framework (Broadway)
- IELTS Band 7.5 (C1 - Advanced English)

Languages

- Nepali (Native)
- English (Professional)
- Portuguese (Intermediate B1/B2)
- Hindi (Fluent)
